

## I-A-001-S WEARABLE INJECTION ABDOMEN (BELLY)

### WEARABLE INJECTION ABDOMEN (BELLY)

Learn how to make a subcutaneous injection with a real abdominal skin feeling. It offers to students a realistic injection experience in their simulation lab.

Our artificial wearable abdomen was designed by our laboratory to allow subcutaneous injections in order to teach the right techniques (Insulin pumps, pen-style injections, and many types of self-injections). The medical grade MedicSkin® formula from MEDICOR LAB has been studied in the laboratory to give the texture the most like human skin. With our products (Adult and Pediatric) you will be able to pinch the skin to perform the injection.

A special sponge inside the product absorbs the liquid until saturation. This product allows you to inject liquid and evacuate it easily through the drain.

#### Choose your color

All our MedicSkin® products are available in a choice of 3 colors, this allows you to adapt the products to the color of your manikins (Depending on the brand you have. Ex.: CAE Healthcare™, Laerdal Medical™, Gaumard™, Nasco™, Sakamoto™, 3B Scientific®, or some other manufacturers), or for your task trainers, your busts or arms, or to use the products to fit also during your simulation with standardized patients.

#### Straps

As an option (Check the description and reference number) you can order our injection products with an adjustable strap to attach them to your manikins or standardized patients.

#### MedicSkin®

Every product is made of our realistic MedicSkin®, an innovative material that offers a high level of realism, hypoallergenic, which does not mold, is durable and above all with an easy maintenance. With MedicSkin®, the needle tracks disappear with minimal damage.

#### Liquid injection

All products are injectables, it means that you can inject air on MedicSkin®. If it's specified, you can inject liquid in the trainers, a special sponge inside the product absorbs the liquid until saturation, evacuate it easily through the drain. (Rinse with distilled water)

#### Ultrasounds

The trainers are also ultrasound scannable for ultrasound simulation. For example, use the IV arm for your training for ultrasound-guided intravenous (IV) access. (Showing the user the needle or catheter).
