

S-S-001 SUTURING PRACTICE SKIN WITH WOUNDS

SUTURING PRACTICE SKIN WITH WOUNDS

Suturing is the most common method of wound closure for minor wounds. Learn intracutaneous suture techniques with a hyper-realistic innovative product. As usual, we use the innovative formula MedicSkin®.

Our artificial skin perfectly imitates the epidermis, allowing for more realistic practice and puncture resistance. This product allows incisions, sutures and punctures to be performed without injection in a safe setting. Also ideal for the practice of stitch removal.

Choose your color

All our MedicSkin® products are available in a choice of 3 colors, this allows you to adapt the products to the color of your manikins (Depending on the brand you have. Ex.: CAE Healthcare™, Laerdal Medical™, Gaumard™, Nasco™, Sakamoto™, 3B Scientific®, or some other manufacturers), or for your task trainers, your busts or arms, or to use the products to fit also during your simulation with standardized patients.

MedicSkin®

Every product is made of our realistic MedicSkin®, an innovative material that offers a high level of realism, hypoallergenic, which does not mold, is durable and above all with an easy maintenance. With MedicSkin®, the needle tracks disappear with minimal damage.

Liquid injection

All products are injectables, it means that you can inject air on MedicSkin®. If it's specified, you can inject liquid in the trainers, a special sponge inside the product absorbs the liquid until saturation, evacuate it easily through the drain. (Rinse with distilled water)

Ultrasounds

The trainers are also ultrasound scannable for ultrasound simulation. For example, use the IV arm for your training for ultrasound-guided intravenous (IV) access. (Showing the user the needle or catheter).
